

## Step-by-step instructions

### Step 1 - Power and Wiring

Find the ideal placement for remote LED drivers. Either at the nearest utility room or the track power box. From there, run the 16-18 gauge wires to your J-Box location.

### Step 2 - Take Measurements

Measure the desired height from the fixture to the ceiling. The power feed cable is 16 ft long, the fixture can be placed within that distance. Make sure to save 6 inches for electrical connection at the j-box. And save 6 inches for electrical connection at the terminal box. Cut and discard excessive cable length.

### Step 3 - Aircraft Cable

Unscrew the grippers from the hangar mounts. Slide the hangar mounts onto the top side of the track. The aircraft cable's length can be adjusted through the gripper. Cut and discard excessive cable length. Complete step by screwing the gripper back to the hangar mounts

### Step 4 - Terminal Box Wiring

Take the terminal box out and remove the cover by sliding out. Using a screwdriver, remove the pre-installed wires from the terminal box. Make sure to keep the internal wires untouched. Insert power feed cable from the canopy set to the terminal box and fasten them with a screwdriver. - Black is negative (Black to Black)  
- White is positive (White to Red)

### Step 5 - Attach Terminal Box

Insert the pin into the slots on the power plate and terminal box. Using the coupler, attach and fasten the terminal box to the MAGfinity track.

### Step 6 - Mount Bracket

Fasten the mounting bracket to the J-box with the provided screws.

### Step 7 – J-Box Wiring

Pull the feeding cable through the cable bushing on the canopy plate. Connect the feeding cable wires from the inside of the canopy to the preinstalled electrical wires inside the J-box using WAGO connectors.

### Step 8 – Canopy Placement

Using the screws on the side, Insert the canopy cover plate over the mounting bracket. Securely place it on the j-box.

### Step 9 – Joining MAGfinity Track

If needed, connect all the magtrack's consecutive elements with a pin in between the power plates located on each component. Please make sure to slide the hangar mounts onto the top side of another MAGfinity track before connection.

### Step 10 – Placing the luminaires

Snap-in place desirable luminaires and enjoy the installation!
